The Big Blue™ Transgenic Mouse Mutagenesis Assay System
The Only Complete, Short Term, Tissue Specific In Vivo Mutagenesis Assay System in the World

- Big Blue™ Transgenic Mice: inbred C57BL/6 & hybrid B6C3F1
- Easy Characterization of Mutations by Sequence Analysis
- Easy Mutant Detection
- Tuition-free Training Workshops in U.S. and Europe
- Strong Technical Support
- Currently under Evaluation by U.S. Regulatory Agencies
- Identify Mutations in any Tissue, Including Germ Cells
- Cost Effective

Obtain valuable and important tissue-specific in-vivo mutation data not previously available! Multiple copies of a lambda shuttle vector containing the lacI target gene have been integrated into each cell of every Big Blue mouse. After delivery of your test compound by any route of administration, these shuttle vectors containing the target gene can be easily and quickly recovered from genomic DNA by packaging into lambda phage particles. After infection into E. coli, mutations in the lacI gene are detected as indicated below. Mutant frequencies are determined by calculating the ratio of mutant blue plaques to non-mutant colorless plaques.

Choosing lacI as your target gene means easy detection, high sensitivity to a variety of mutation endpoints, and valuable comparisons to in vitro mutagenicity data.

Call Stratagene today for our complete system including licensing information, tuition-free workshop dates, and licensed contract labs who can conduct studies for you.

* Patents Pending
**NEW NEW NEW**

**Molecular Structures in Biology**

**ON CD-ROM**

*Molecular Structures in Biology* incorporates the Brookhaven Protein Data Bank with complementary graphics, image, database, and text programs, providing anyone working with biomacromolecular structures with a powerful and flexible reference, research, and teaching tool.

- interrogate over 600 PDB files
- view and compare images from the PDB picture bank
- construct and store new graphic views of molecules
- read texts written specifically for the package by leading international experts
- follow hypertext links from texts to graphics, image, and data programs
- display text, graphics, data, and images on screen simultaneously
- exploits the power of IBM PS/2 graphics workstations, the multitasking window environment of OS/2 and Presentation Manager, and the large storage capacity of CD-ROM

**Price:**

Academic version: £750
Commercial version: £3000

---

**NEW VERSION**

**Desktop Molecular Modeller**

**VERSION 2.0**

The sophisticated construction, manipulation, and calculation techniques of this versatile molecular modelling package for the PC have been further enhanced to increase the program's applications in teaching and research. About 30 structures and fragments are supplied with the program, with a suite of additional programs and structure libraries available separately to extend still further the scope of the package.

**The new version includes:**

- Increased atom limit of 2700 (3400 for the maths co-processor version)
- Improved and faster energy minimization algorithm, taking into account partial atomic charge and non-bonded energies
- PostScript and HPGL plotter output
- Chemical sense, valency checks, and valency filling as an aid to editing
- Improved user interface
- Facility for running 'Add-In' programs from within DTMM
- Cut and paste of DTMM 'slide show' files

**Price:**

Package £295

SUBSCRIPTIONS

A subscription to Carcinogenesis comprises 12 issues, with an Annual Author and Subject Index. Subscriptions are entered on a calendar year basis only. Price includes postage by surface mail or, for subscribers in the USA and Canada by air freight or in India, Japan, Australia and New Zealand, by Air Speeded Post. Airmail rates are available on request.

Annual subscription rate (Volume 13, 1992)
Institutions: Europe and UK £250.00, Rest of World $460.00
Individuals*: Europe and UK £105.00, Rest of World US$170.00

*Individual rates apply only when copies are sent to a private address and payment is made by personal cheque or credit card.
Back volume prices are available on request.

Orders. Orders and payments from, or on behalf of, subscribers in the various geographical areas shown below should be sent to the office indicated.

The Americas: Oxford University Press, Distribution and Information Systems, 2001 Evans Road, Cary, North Carolina 27513, USA.
Japan: available from the following agents: Kinokuniya Company Ltd, Journal Department, PO Box 55, Chitose, Tokyo, 156 Japan; Maruzen Company Ltd, Journal Division, PO Box 5050, Tokyo International, 100-31 Japan; Usaco Corporation, 13-12, Shim bestselling 1-chome, Minato-ku, Tokyo, 105 Japan.
Rest of the World: Journals Subscriptions Department, Oxford University Press, Walton Street, Oxford OX2 6DP, UK.
Tel: (0865) 267773, telex: OXPRES 873330; fax: (0865) 267773.
